

The *HOPPER HAMMER*[™] is the answer to ---

- Plugged hoppers
- Bridging
- Rat-holing

Applications:

- Precipitators/baghouses
- Coal Feeders
- Transfer hoppers

The *HOPPER HAMMER*[™] operates on 120 V standard electrical power. No maintenance is required. Its Single Rapper Control allows you to select how hard you want the *HOPPER HAMMER*[™] to hit, how many times you want it to hit, and how often you want to repeat the cycle.

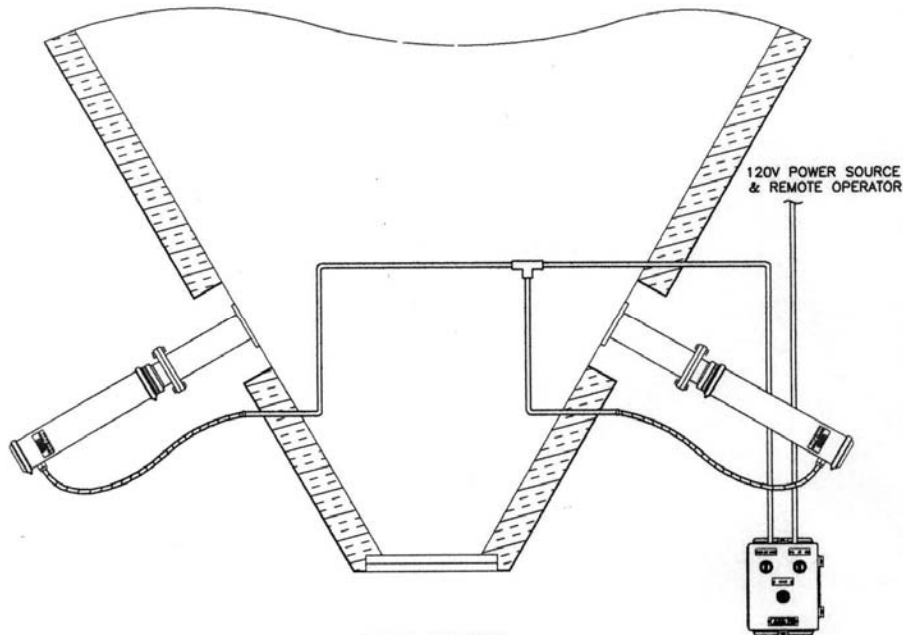

The sharp impacts of the *HOPPER HAMMER*[™] dislodge material much more effectively than high frequency vibrations. The Model 300 Single Rapper Control (SRC) operates the unit at three hits per second with up to 25 foot pounds of impact giving you the results of a sledge hammer without the manual effort. The control can operate independently with its own built-in timer or it can be integrated into an existing evacuation system.

DOUBLE-TEAM YOUR HOPPER PROBLEMS!!

If the right one won't get them then the left one will! Or, hit them both at the same time! The A.V.C. Specialists Double Rapper Control (DRC) and the Model SR-A1 rappers team up to solve the most difficult hopper plugging problems. The DRC has the same control features as the single control version plus the ability to drive two rappers. Also, relays can be installed in the rugged NEMA 4 enclosure to interface with existing evacuation systems.

Contact A.V.C. Specialists to solve your hopper, chute or bin plugging problems.
